

Bubble Tubing® is a flexible linear air diffuser made in Canada, kink resistant and retains its original shape.

With a row of perforations on each side, Bubble Tubing® produce many air bubbles (1mm to 3mm diameter). Bubbles rise evenly from where it was installed. Bubble Tubing® is an extremely effective diffuser for a wide range of applications. Most versions of the tubing include a ballast fused to the tubing to keep it at the bottom of the water.

For industrial applications, varying lengths of Bubble Tubing® are available. Installation is facilitated by the integrated stainless steel cable.

Bubble Tubing® does not contain any moving parts, its maintenance is quick and easy.

*“Overall, the results obtained for the CanadianPond.ca Products Ltd. Aeration systems were uniformly excellent and produced some of the highest SOTE values GSEE Inc. Has observed.”*

GSEE, Inc.  
Environmental Consultants,  
Lavergne, TN

## Applications

- Aeration
- Underwater Sound Attenuation
- Aquatic Bubble Barrier
- Water Mixing
- Pathogen Reduction
- Deicing
- Deflection

## Third Party Tested

- Aeration—GSEE
- Deicing + CFD —C-CORE
- Sound Attenuation—GKM Consultant
- Debris Deflections + CFD —C-Core

## Maintenance / Warranty

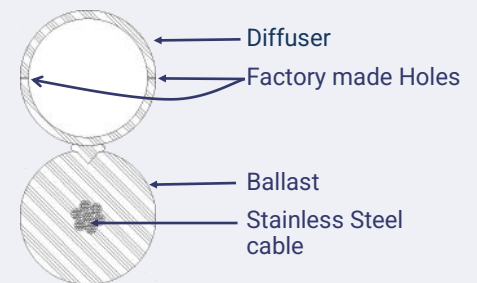

- Use our Eco-Purge product periodically to remove the bio-film that clogs the diffuser.  
*\* Safe for aquatic fauna and flora.*
- Short burst of overpressure can also be used to clean the tubing.
- 1 year warranty

## Dimensions and formats

- 4 dimensions : 1/2", 3/4", 1" and 1.25" ID.
- Weighted, non/weighted.
- Available in rolls or spools.
- Custom length available.

## Construction / Requirement

- Material: PVC
- Made in Canada 
- Resist deterioration from exposure to UV rays, chemicals, salinity, and changes in pH or temperature of water.
- Stainless steel cable integrated for tubing of 3/4", 1" and 1.25" size.

- 30 psi – 2.8 BAR minimum pressure compressor capacity.
